

RAG-Augmented Multi-Agent LLM Framework for Explainable Software Vulnerability Detection Using CWE Knowledge Bases

Richa Verma (25MCSS02) Advisor: Dr. Akshay Pandey

The steps, without a live model

This report connects the steps into one pipeline. It continues report 5.

What we did

The tool now runs in a fixed order. First it marks risky lines. Those marks are evidence. They are not the final decision.

Then it searches the CWE book. Then a template fills the answer form. No paid model is called in this report.

A checker then looks at the form. The CWE must be in the book. The cited lines must exist. The fields must agree with each other.

If the decision disagrees with the simple checker, that is only a warning. We also save a confidence number. We do not use it to skip work.

Picture

Numbers for this step only

Step	Job
Mark lines	Point at risky spans.
Search	Pick CWE pages.
Write	Fill the form from a template.
Check	Reject a broken form.

What is next

Next we will try a live language model on examples written to fool the simple checker.

What this report does not claim

The template is only a stand-in. It is not the system we want to rely on.
